AWS LANDING ZONE

Build a secure, best-practice cloud environment for your business in minutes

USE LANDING ZONE TO CREATE AND MANAGE YOUR AWS CLOUD ENVIRONMENT

SECURE
Landing Zone is an AWS-provided pattern for creating secure business environments in the cloud, combined with strong identity and access management tools and processes.

RAPID
It only takes an experienced engineer minutes to stand up a Landing Zone deployment, based on discovery of your business needs. Adding capacity later is the click of a button.

BEST PRACTICE
Based on years of experience from AWS and customer engineers, incorporating best practice from industries like finance, government, manufacturing, and health care

WHY CUSTOMERS CHOOSE AWS LANDING ZONE

Landing zone can be the right choice for your business if:

You don't yet have an AWS cloud presence, and want to start migrating workloads into a secure, pre-built environment with strong controls and governance

You want to start realising the benefits of cloud, including reduced time-to-value, reduced operational overheads, improved resilience, and stronger cost management, but don't know where to start

You have a compelling event that requires you to consider plans for physical infrastructure, such as a data centre exit or an urgent need to increase capacity for remote workers

You already have an AWS cloud presence that's evolved organically over time, and needs some structure

A Cevo-built AWS Landing Zone can be delivered in as little as two weeks, based on developing an understanding of your specific business needs and working with your existing engineering teams to ensure seamless integration and operations.

ANALYSE

Cevo's consultants begin by working with your engineering teams and business leaders to understand the requirements and create a pilot implementation plan, including cost projections and ongoing operational requirements.

CONSULT

Cevo will assist with creating your AWS accounts, deploying the Landing Zone pattern and integrating it with your existing networks. Pilot integration with existing identity management systems is also included.

REPORT

Cevo will provide an implementation report specifying the implemented solution, ongoing operational needs, and considerations for future expansion including cost and timing estimates.
