

## AMAZON WORKSPACES

Leverage Amazon Workspaces to provide secure, remote access for your internal teams and suppliers for a fraction of the traditional DaaS costs.

### AMAZON WORKSPACES 50 USER PILOT

Remote work has increasingly become a part of everyday working life for many organisations and users that have typically not had to operate in this fashion. The Amazon Workspaces pilot provides a rapid solution to deliver quick and easy access to Enterprise Line of Business applications from a secure, trusted environment with Enterprise grade security and control.

Cevo's Amazon Workspaces pilot helps our customers accelerate a move to remote working for internal staff or offshore suppliers using a proven integration framework that lowers operational risk and provides a rapid solution for testing and roll out to users.

### WHY CUSTOMERS USE AMAZON WORKSPACES

This four-week Amazon Workspaces pilot is relevant to you if:

You are currently planning on how to provide secure remote access solutions to staff, contractors and suppliers

You require a mix of both Windows and Linux based desktops and support BYOD models

You have a requirement for a solution that spans multiple regions and geographies

You need to keep your data secure, and have a requirement to BYOK for data encryption

You have a requirement for simple consumption-based licensing

You have a compelling event for shift to remote work and BCP planning

The deliverables from the four-week pilot are a functional 50 user Amazon Workspaces pilot to validate your BCP plans and shift to remote working, along with implementing the foundations for operational readiness.

#### ANALYSE

The engagement begins with an assessment of the remote working functional and non-functional requirements and pilot implementation plan.

Additionally the Cevo consultant will review current infrastructure in context of integrating an Amazon Workspaces pilot.

#### PILOT

Based on the pilot implementation plan the Cevo consultant will prepare the AWS environment for the Amazon Workspaces deployment, and configure the Workspace according to requirements.

Piloting of the solution for up to 50 users will be implemented.

#### REPORT

Cevo will produce the report to support an internal business case for broader rollout of the Amazon Workspaces solution, including timing and cost estimates.
